

## Create a dynamic chart in Excel with VBA code

To create a dynamic chart as shown in the picture below, you will need a simple data ( above the sample Chart image).

Then to run this VBA example code, you can copy and paste the VBA code below in to the block of Worksheet\_Activate() procedure. To open this block, double-click the current worksheet, then in the objects dropdown list select WorkSheet and in events list select Activate.

### VBA code for this example:

Option Explicit

Private Sub Worksheet\_Activate()

'Select the data source

Range("A1:G2").Select

'Create a clustered column chart

ActiveSheet.Shapes.AddChart , 10, 100

ActiveSheet.Shapes(1).Select

ActiveChart.SetSourceData Source:=Range("Sheet1!\$A\$1:\$G\$2"), PlotBy:=xlRows

'Specify Pie chart type

ActiveChart.ChartType = xl3DPie

'Show data labels on the chart

ActiveChart.ApplyDataLabels xlDataLabelsShowValue

End Sub
